

NOVOCERAM MODULO PLUS

A range of modular compositions for indoor and outdoor use

Novoceram, a French ceramic manufacturer since 1863, presents a selection of laying patterns for modular porcelain stoneware compositions, for indoor and outdoor use.

PRESS RELEASE

Novoceram's **modular compositions** offer a new way of interpreting installation thanks to a selection of exclusive patterns designed to enhance the Losa, Racines, Serac, Solithe, Tiber and Zephyr collections. Inspired by both ancient heritage, such as Roman opus and bands, and contemporary research into rhythm and balance, they transform floors and wall coverings into true graphic architecture.

Thanks to the variety of formats and finishes, each composition showcases the full diversity of ceramics, offering new aesthetic solutions that are easy to install and suitable for both indoor and outdoor spaces. All installation designs created by **Novoceram** are protected by the European Union Design Regulation (EUDR 2024/2822).

The range consists of **11 models** with a thickness of **9.0 mm**, in both R10 A+B and R11 A+B+C finishes, and **14 models** with a thickness of **20 mm** in the R11 A+B+C finish. The variety of formats available ranges from 30x30, 30x60, 60x60 to 60x120, in varying quantities depending on the model chosen. In addition to the formats already mentioned, the outdoor range includes certain models specially designed for the 60x90 format with a thickness of 20 mm.

These patterns are available in the Losa, Racines, Sérac, Solithe, Tiber and Zéphyr collections, which stand out for their richness and graphic variety when laid in multiple formats. The type of patterns available for each collection varies depending on the range of formats offered.

To find out more about modular compositions and (re)discover all the Novoceram collections, visit the **website**, the **Facebook page** or **Instagram**.

NOVOCERAM MODULO PLUS

A range of modular compositions for indoor and outdoor use

OUR CERTIFICATIONS:

- **ISO EN 9001**: standard that sets out the requirements related to the **company's quality management system** that is part of a continual improvement at all levels which include: customer relations, willingness to communicate, internal organisation, relations with suppliers and production processes.
- **ISO EN 14001**: standard that sets out the requirements related to the **environmental management system** based on **environmental commitment**, on strict standards and on increasingly ambitious goals that the company has implemented to control and reduce its impact on the environment and to continuously improve its performance.
- **ISO EN 50001**: standard that sets out the requirements related to **energy management systems**. This certification, driven by the wish to better control and optimise energy consumption, is the logical continuation of a continuous improvement approach and an environmental commitment.
- **ISO EN 17889-1**: standard that establishes requirements for **energy management systems**. This certification, motivated by the desire to better control and optimise energy consumption, is the logical next step in a process of continuous improvement and environmental commitment.

PRODUCT CERTIFICATIONS:

- **Indoor emissions**: index measuring emissions of volatile substances posing a risk of inhalation toxicity. All our tiles are assigned A+, - the best note in the classification. Furthermore, as **they do not contain Volatile Organic Compounds (VOCs)**, they even outperform all the requirements for the A+ classification.
- Novoceram products are involved in obtaining various ecological certifications for the construction industry such as the American certification, **LEED** (Leadership in Energy and Environmental Design). Novoceram has also established the **PEF** (Performance Environnemental Footprint) and **EPD** (Environnemental Product Declaration) of its products which indicate the potential environmental impact of a product throughout its entire life cycle.
